

February 05, 2026

Dear Customer:

Thank you for contacting Thermo Fisher Scientific regarding embedded emissions associated with products that may be affected by the European Union Carbon Border Adjustment Mechanism (CBAM).

Consistent with our mission to enable our customers to make the world healthier, cleaner, and safer, Thermo Fisher Scientific is committed to reducing carbon emissions and supporting a net-zero ambition by 2050. Additional details on our sustainability initiatives are available in our Corporate Social Responsibility Report.

Based on a comprehensive internal assessment, we determined that our exposure under the CBAM framework is very limited. Given the nature and scale of this exposure, the development of detailed product-level emissions data is not warranted at this time. Accordingly, CBAM reporting will be completed using the approved default values.

Should you have further questions regarding CBAM or our assessment process, please contact our CBAM project team at cbam@thermofisher.com.
